

Project Development – Delivery plan sprint-2

IoT Based Safety Gadget for Child Safety Monitoring & Notification

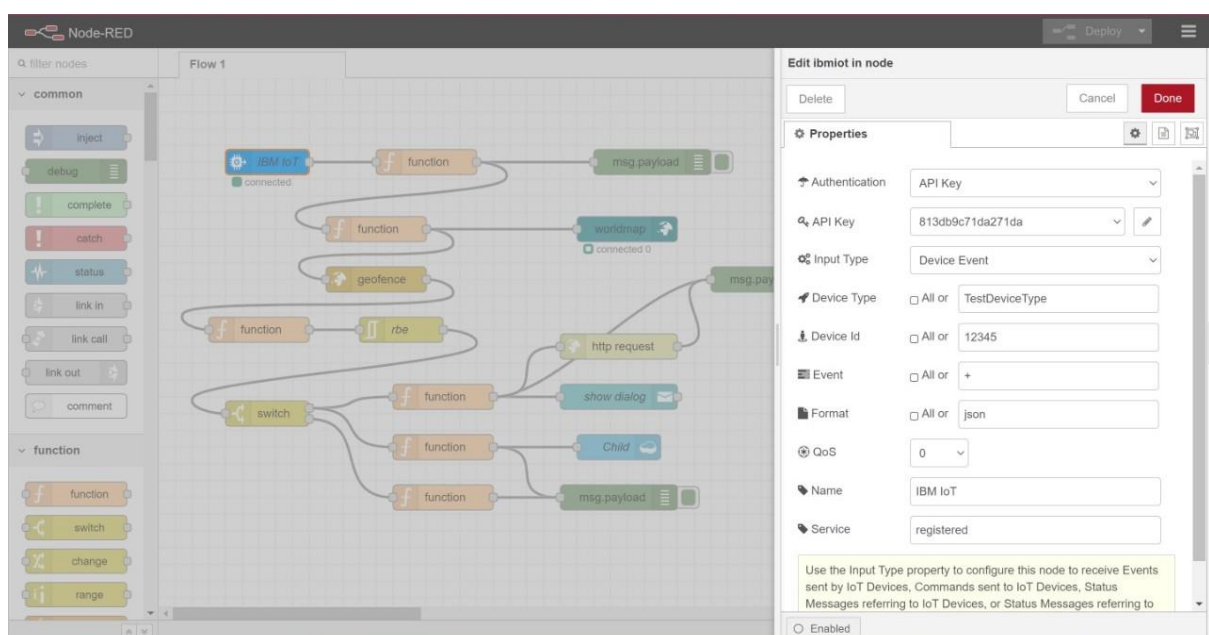

TEAM ID:PNT2022TMID27117

Creating Node-Red service and connecting with IBM cloud and Web UI

Creating Node-Red service:

Codes in each Node:

Node-RED interface showing a flow named "Child Tracker" in Flow 1. The flow starts with an "IBM IoT" node (connected), followed by a "function" node, then another "function" node, a "geofence" node, and finally a third "function" node. The "Edit function node" panel is open, showing the following JavaScript code:

```
1 var name = msg.payload.name
2 var lat = msg.payload.lat
3 var lon = msg.payload.lon
4 global.set('latitude',lat)
5 global.set('longitude',lon)
6 global.set('name',name)
7 return msg;
```

The "Properties" panel shows the node name as "Name". The "Setup" tab is selected. The "Enabled" checkbox is checked.

The dashboard on the right shows a "Child Tracker" tab with a "Map" view.

URL: <https://node-red-opszk-2022-11-04.eu-gb.mybluemix.net/red/#editor-tab-properties>

Node-RED interface showing the same "Child Tracker" flow. The "Edit debug node" panel is open, showing the following configuration:

- Output: msg.payload
- To: ☒ debug window
- ☐ system console
- ☐ node status (32 characters)
- Name: Name

The "Enabled" checkbox is checked.

Node-RED interface showing the same "Child Tracker" flow. The "Edit function node" panel is open, showing the following JavaScript code:

```
1 msg.payload = {
2   'name': global.get('name'),
3   'lat': global.get('latitude'),
4   'lon': global.get('longitude')
5 }
6 return msg;
```

The "Properties" panel shows the node name as "Name". The "Setup" tab is selected. The "Enabled" checkbox is checked.

Node-RED interface showing a flow named "Flow 1" and the "Edit worldmap node" configuration panel.

Flow 1: The flow starts with an **IBM IoT** node (connected), followed by a **function** node. The output of the function node goes to a **worldmap** node (connected 0). The **worldmap** node's output goes to a **msg.payload** node. The **worldmap** node also has a **geofence** node connected to it. The **geofence** node's output goes to a **function** node, which then connects to an **http request** node. The **http request** node's output goes to a **show dialog** node, which then connects to a **Child** node. The **Child** node's output goes to a **msg.payload** node.

Edit worldmap node Properties:

- Group: [Child Tracker] Map
- Size: auto
- Start: Latitude 17.4226372, Longitude 78.5456505, Zoom 16
- Map list: 7 selected
- Base map: ESRI Satellite
- Overlays: 5 selected
- Cluster when zoom level is less than 0 (0, off - 19)
- Max age: Remove markers after 600 seconds
- User menu: Show
- Layer menu: Hide
- Lock map: False
- Lock zoom: False
- Auto-pan: Disable
- Right click: Disable
- Enabled

Node-RED interface showing a flow named "Flow 1" and the "Edit geofence node" configuration panel.

Flow 1: The flow starts with an **IBM IoT** node (connected), followed by a **function** node. The output of the function node goes to a **worldmap** node (connected 0). The **worldmap** node's output goes to a **msg.payload** node. The **worldmap** node also has a **geofence** node connected to it. The **geofence** node's output goes to a **function** node, which then connects to an **http request** node. The **http request** node's output goes to a **show dialog** node, which then connects to a **Child** node. The **Child** node's output goes to a **msg.payload** node.

Edit geofence node Properties:

- Map: A map showing a geofence area around a location in Chennai, India.
- Floor: ground
- Ceiling: Infinity
- Action: add "inarea" property
- Enable output of zones to WorldMap node
- Enabled

Node-RED interface showing a flow named "Child Tracker" and the "Edit function node" configuration panel.

Child Tracker Flow: The flow starts with an **IBM IoT** node (connected), followed by a **function** node. The output of the function node goes to a **worldmap** node (connected 0). The **worldmap** node's output goes to a **msg.payload** node. The **worldmap** node also has a **geofence** node connected to it. The **geofence** node's output goes to a **function** node, which then connects to an **http request** node. The **http request** node's output goes to a **show dialog** node, which then connects to a **Child** node. The **Child** node's output goes to a **msg.payload** node.

Edit function node Properties:

- Name: Name
- Setup: On Start, On Message, On Stop
- Code:

```
1 msg.payload=msg.location.inarea
2 return msg;
```
- Enabled

Dashboard: The dashboard shows a "Child Tracker" tab with a "Map" view.

Node-RED interface showing a flow named "Child Tracker" with nodes: inject, debug, complete, catch, status, link in, link call, link out, comment, function, switch, msg.payload, worldmap, rbe, and switch. The "Edit filter node" panel is open, showing properties: Mode (block unless value changes), Property (msg. payload), Apply mode separately for each (checked), msg. topic, and Name (rbe).

<https://node-red-opszk-2022-11-04.eu-gb.mybluemix.net/red/#editor-tab-properties>

Node-RED interface showing the same flow. The "Edit switch node" panel is open, showing properties: Name (Name), Property (msg. payload), and rules: is false (→ 1) and is true (→ 2). The "checking all rules" checkbox is checked.

<https://node-red-opszk-2022-11-04.eu-gb.mybluemix.net/red/#editor-tab-properties>

Node-RED interface showing the same flow. The "Edit function node" panel is open, showing the function code:

```
1 var d = new Date();
2
3 var utc = d.getTime() + (d.getTimezoneOffset() * 60000);
4
5 var offset = 5.5; // This is the offset for UTC*3, in your case (UTC*1)
6
7 newDate = new Date(utc + (3600000 * offset));
8
9 msg.payload = {
10   "message": "Exit",
11   "time": newDate.toLocaleString(),
12   "name": global.get('name'),
13   "lat": global.get('latitude'),
14   "lon": global.get('longitude')
15 };
16
17 return msg;
```

<https://node-red-opszk-2022-11-04.eu-gb.mybluemix.net/red/#editor-tab-properties>

Node-RED interface showing a flow named "Child Tracker" and the "Edit function node" dialog.

Flow 1: The flow starts with a "function" node, followed by a "msg.payload" node, then another "function" node, a "worldmap" node, a "geofence" node, another "function" node, an "rbe" node, and finally a "switch" node.

Edit function node: The "On Message" tab is selected. The code is as follows:

```
1 var d = new Date();
2 var utc = d.getTime() + (d.getTimezoneOffset() * 60000);
3 var offset = 5.5; // This is the offset for UTC+3, in your case (UTC+1)
4
5 newDate = new Date(utc + (3600000* offset));
6
7 msg.payload={
8   "message":"Entry",
9   "Time": newDate.toLocaleString(),
10  "name": global.get('name'),
11  "lat": global.get('latitude'),
12  "lon": global.get('longitude')
13 };
14
15 return msg;
```

The "Properties" tab shows the "Name" field set to "Name".

Node-RED interface showing a flow named "Flow 1" and the "Edit http request node" dialog.

Flow 1: The flow starts with a "function" node, followed by a "msg.payload" node, then another "function" node, a "worldmap" node, a "geofence" node, another "function" node, an "rbe" node, and finally a "switch" node. The "switch" node has four outputs: "function", "Child", "show dialog", and "msg.payload".

Edit http request node: The "Properties" tab is selected. The settings are as follows:

- Method: GET
- URL: <https://www.fast2sms.com/dev/bulkV2?authorizati>
- Payload: Ignore
- Enable secure (SSL/TLS) connection: ☐
- Use authentication: ☐
- Enable connection keep-alive: ☐
- Use proxy: ☐
- Only send non-2xx responses to Catch node: ☐
- Return: a UTF-8 string
- Name: Name

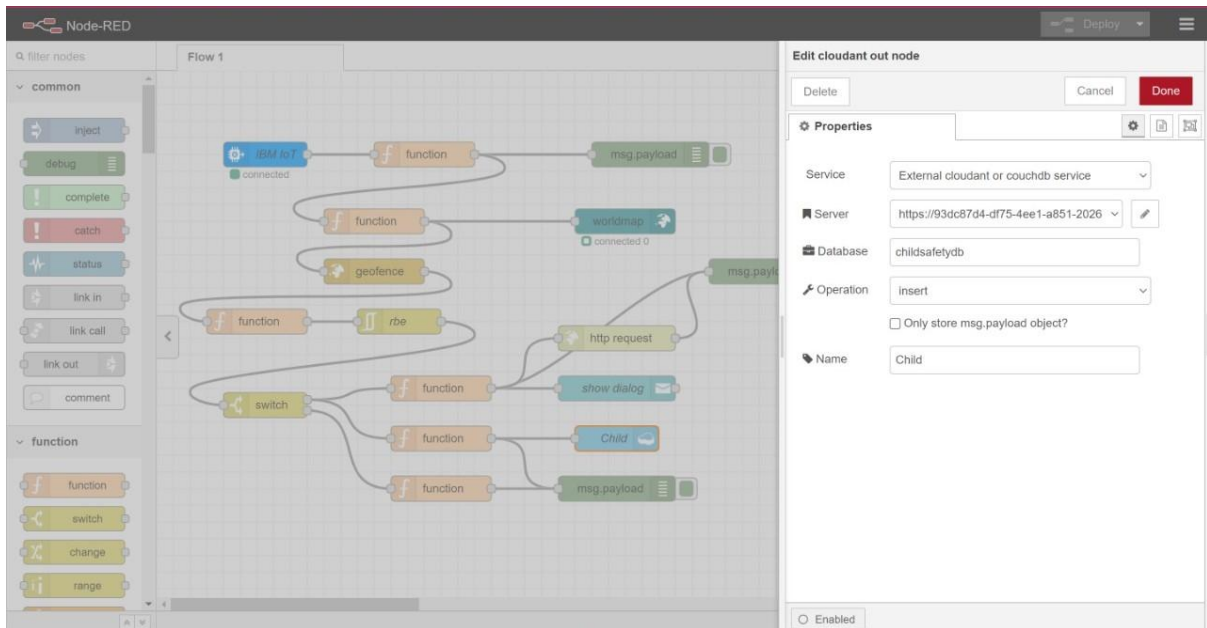

Node-RED interface showing a flow named "Flow 2" and the "Edit notification node" dialog.

Flow 2: The flow starts with a "function" node, followed by a "msg.payload" node, then another "function" node, a "worldmap" node, a "geofence" node, another "function" node, an "rbe" node, and finally a "switch" node. The "switch" node has four outputs: "function", "Child", "show dialog", and "msg.payload".

Edit notification node: The "Properties" tab is selected. The settings are as follows:

- Layout: OK / Cancel Dialog
- Send to all browser sessions: ☒
- Default action label: OK
- Secondary action label: (optional label for Cancel button)
- Accept raw HTML/JavaScript input in msg.payload to format popup: ☐
- Class: [msg.className]
- Topic: [msg.topic]
- Name: Show Dialog

Note: checking Accept raw HTML/JavaScript can allow injection of

Connecting with IBM Cloud: Using IBM IOT node through the API key

The image shows the 'Browse API Keys' page in the IBM Watson IoT Platform. The page displays a table with 2 results, showing API keys and their roles.

Key	Description	Role	Expires
a-4o1qxb-d5wguvebrf	-	Standard Application	-
a-4o1qxb-ecmygwzdc	API Key for the device simulator	Standard Application	-

1 Simulation running

Apps using your microphone: Google Chrome

The image shows the 'Browse API Keys' page in the IBM Watson IoT Platform, displaying detailed information for a specific API key.

Key	Description	Role	Expires
